

PRESS RELEASE

26.06. 2017

New Commercial Director for G & P Batteries

Waste battery collection and recycling expert G & P Batteries has welcomed seasoned waste professional Tom Seward to its senior management team.

Tom joins as commercial director from outsourced waste management and recycling company, Reconomy, where he worked as corporate account manager for more than three years in their house building division. Prior to that, he held several positions at Biffa between 2006 and 2013.

A graduate in business from Durham University, Tom initially set up his own IT business as a network analyst before joining Severn Trent plc as a graduate.

At G & P Tom will be responsible for consolidating G & P's leading market position in both the waste lead acid battery and non-lead acid battery arena as well as capitalising on the business openings afforded by the growing lithium waste battery market.

Said Greg Clementson, managing director of G & P Batteries: "We're pleased to welcome Tom into the business. His wide-ranging experience and strategic management skills will be a great asset moving forward as we look to increase collection for all waste battery chemistries."

Added Tom: "Since I have worked in the industry, G & P has been the respected specialist in the waste arena in the UK and as part of ECOBAT Technologies, the world's largest producer and recycler of lead, this is a fantastic opportunity for me to expand my knowledge of a wide range of other products and technologies at a pivotal time for further growth in the waste battery market."
