Europe-wide Battery Recycling

www.onecallcollection.com
OneCall Collection (OCC) is the first Europe-wide collection system for lead acid batteries, accumulators and other chemistries of batteries including lithium batteries. Developed by the world’s largest lead manufacturer ECOBAT Technologies, a company renowned for closing the recycling loop for lead, this new OCC initiative is believed to be the only system of this kind in Europe.

ECOBAT companies collect lead batteries throughout Europe, transporting them to certified waste management companies from where the European lead smelters recycle the batteries, producing high quality lead products and other components. Most of the lead and many of the components are used in the production of new batteries.

All other battery chemistries are sent to our UK waste battery specialist company in Darlaston, West Midlands. There they are sorted according to their chemical composition and stored until an optimal quantity is achieved for recycling by our carefully chosen partners. Where possible, these batteries are recycled within the UK.

OCC is a fully compliant, secure and environmentally friendly service which can be accessed anywhere in Europe. OCC works with battery dealers, auto repair shops, scrap dealers and any other contractors who have waste batteries to dispose of.

Our service provides

- Legal certainty
- Environmental compliance
- The best terms and payments
- Fast and efficient service
- Excellent recycling rates (more than 95% for lead batteries)
A Comprehensive Recycling Solution

OneCallCollection in the European Union

- More than 50,000 collection points in the EU
- 10,000 members / customers
- More than 100 Million used batteries per year
- Dedicated OCC truck fleet with more than 60 vehicles
- More than 150 OCC employees

OCC offers a completely secure collection service for all waste batteries and accumulators, serving automotive and battery manufacturers as well as for other trades and industries.

Management of waste batteries of all kinds

OneCallCollection ensures the legal compliance and proper disposal of all types of batteries. In addition to handling lead-acid batteries of all kinds, OCC also provides certified and reliable recycling solutions for hazardous materials such as lithium batteries.

Provision of collection containers

With industry-specific, approved storage solutions for each different battery type, OCC offers peace of mind that batteries are being stored and transported correctly. The OCC team can advise customers on the most appropriate storage solutions, depending on whether batteries are being stored indoors or outside. For example, storage for lead acid batteries can be provided with a 600 litre capacity up to 100 X 120 X 70 cm tall, for indoor or outdoor placement and with or without a lid.
For lithium ion batteries, OCC uses the audited and patented security system LIONGUARD® which features PyroBubbles® technology developed by our partner GENIUS Technology GmbH to achieve highest levels of safety when storing and transporting these batteries.

**Agreed Collection Schedules**

Collection days and time slots are agreed in advance, resulting in a reliable service that guarantees safe and compliant transportation and storage.

**Recycling whenever possible**

As many components as possible are recovered from batteries collected by OCC. More than 95% of the components of lead acid batteries collected are recycled by ECOBAT’s European smelters.

For all other battery chemistries, we have strict monitoring processes to ensure our chosen partners adhere to the same high standards as we do in their health, safety and environmental approach to compliance, with all storage and recycling facilities strictly monitored and certified as specialized waste management centres.

**Great terms for OCC Customers**

OCC is a highly efficient collection system enabling us to offer the best possible rates to our customers, depending on quantities and collection frequencies.

**Benefits of OCC membership at a glance**

➔ OCC Internet portal for logistics management and order tracking
➔ Free provision of pallet boxes
➔ Flexible quantities
➔ Just-in Time collection of all batteries
➔ Legally compliant document destruction
➔ Immediate payment at current market prices
➔ P.O.S. Promotional material for your own use
OCC Disposal System

Optimised logistics processing

OCC provides access to a dedicated customer portal for booking collections. This portal also provides details of current order levels and remuneration terms, giving our customers all the facts concerning their orders.

Portal highlights include:

➔ Central booking of all waste disposal orders
➔ Monitoring of the status of each individual order
➔ Direct access to order documentation (invoices, weighing notes, delivery notes, statistics, etc.)
➔ Ability to manage and monitor pick-up locations for multi-site companies
➔ Contract management (for different disposal arrangements)
➔ User profile management

Effective disposal of used batteries and batteries is essential for protecting our environment and natural resources. The European Battery Directive requires battery manufacturers to take responsibility for the safe collection and recycling of waste batteries.

In Europe, ECOBAT Technologies group ensures all materials from lead acid batteries benefit from a complete closed loop recycling service, with batteries dealt with responsibly from both an ecological and economical perspective.

We believe that our complete service, offering collection and transportation of used batteries for environmentally friendly treatment and recycling in our secondary lead smelters of the company group puts us at the forefront of materials recycling.

We are also committed to sustainability. All our waste management facilities are certified under the Quality Management System DIN EN ISO 9001ff underlining the professionalism of our OneCallCollection system.

**Environmental Responsibility**
Customer Benefit

VALUE THROUGH EFFICIENCY

OneCallCollection gives customers throughout Europe the best possible system for battery collection and recycling. Efficient logistics, modern equipment and specialist drivers and other personnel guarantee a flexible, reliable, cost effective and legally compliant service that you really can rely on.

Our tailor-made service offers a Europe-wide and fully compliant service operating to the highest standards.

Our long-standing expertise in waste battery collection and recycling guarantees full legal and environmental obligations are met, giving peace of mind for all customers.

Our disposal solutions meet all quality and ecological standards, satisfying environmental considerations as well as customer requirements.

Certified quality and ecologically sustainable solutions stay for exemplary disposal – to the advantage for the customers and the environment.
